DETAILED ACTION

Election/Restrictions

1. This application contains claims directed to the following patentably distinct species of the claimed invention:

Group 1, claims 1-13 are drawn to a resettable memory comprising a memory without reset capability having a data output coupled to a first input of a first multiplexer, a second input having a reset value input, a channel select coupled to a resettable storage cell output that indicates whether a storage cell within said memory without reset capability has been written to after a reset or has been written to after a reset;

Group 2, claims 14-17 are drawn to a method comprising the steps of "presenting a reset value as read value without reset if said storage cell has not been written to after a reset has been applied, said reset value not an actual output value of said memory unit without reset", and "presenting said actual output value without reset as said read value if said storage cell has been written to after said reset has been applied and before a following reset has been applied";

Group 3, claims 18-37 are drawn to a method comprising the steps of "inferring the existence of a resettable memory from a behavioral or RTL level description on a semiconductor circuit", and "incorporating a resettable memory design into a design for said semiconductor circuit";

Group 4, claim 38 is drawn to a resetable memory comprising a memory unit without reset and a reset value write unit that writes a reset value into storage cells of said memory unit without reset after a reset is applied to said resetable memory.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
